

Designed to be used as a sit down kiosk, the Versita is ideal for applications that require the user to be at the terminal for extended periods of time. Furthermore, while comfortable for a seated user, the Versita design is versatile enough for standing visitors and is ADA compliant.

Versita's customizable features make it a valuable addition to any location. The unit comes standard with a 15" LCD touchscreen, but can be upgraded to a 17" or 19" LCD. Other optional equipment includes:

- Video Camera
- Telephone Handset
- Card Reader
- and more (see page 2)

FutureTouch is happy to work with you to adapt any of these features or any others that will insure the satisfaction of your target user.

Additionally, to create and even more personalized feel, the Versita can be customized with multiple colors and finishes. The solid plywood base is professionally laminated to a color of your choosing to compliment your current furniture and decor.
